

## Noble Prize Award

Noble Prize (not to confuse with Alfred Nobel Prize) is an award for outstanding achievements in participatory Health.

While very much inspired by the spirit and importance of traditional Nobel Prize for contemporary science, not least medical science we esteem uniqueness and novelty of Noble prize which is based on people's choice – not choice of any jury.

This is the prize for the new health care and new medical science - and not least new heroes, Prize – for people by people.

6. Wholeness
7. Innovation
8. Good Practice

### People involved

Organising committee  
Patient participations committee  
Scientific committee  
Sustainable development committee  
Citizens Science committee  
Network of patient centred units  
Etc.

## **Noble Prize**

What is more important for a human being than good health and wellness for themselves and those they love?

With that said not many people enjoy in reality such good health and even less have ability to influence their own and loved ones health care.

Not only because of money (some need that too) but also because that health care system is old, fragmented and inefficient,

In the same time great changes are on a way.

New medical Science and new Health care are on a way and here is exactly where Noble Prize Award comes into the picture!

We need to recognize our new heroes, be inspired by their courage enlightened by their wisdom and humbled by their compassion.

### **Therefore Noble Prize Award!**

#### **NPA categories:**

##### **1. Leadership** (with subcategories as follows)

*Generally, this category will connote achievements in changing policies, promoting new ways to think and act, "Game changers" so to speak.*

*Here the group of nominees can share the same prize as we see it in TNPE where prize in chemistry can be given for a group of chemists, who considered to contribute to the solution of the same challenge, but not necessarily know each other personally*

##### **2. Compassion**

This prize, a little bit on the contrary for Leadership prize (which indicate global aspect of achievement) would recognize and celebrate local heroes, who act on behalf of their hearts, they has strong impact on health and life quality for some people in need and their stories should be told so I'm looking forward to nominee those I happen to know, and also sincerely admire. We all need to know their names!

##### **3. Unity**

Prize for best achievements in uniting all forces that constitute participatory movement – patients, clinicians, policy makers etc. Everything what promote "togetherness" like for example patients educating clinicians about how it is like to be a patient or vice versa can constitute ground for nomination.

This price is for promoting Participation and Cooperation as main principles of participatory medicine.

**3. Wisdom** (with 2 subcategories: a. Participatory Science and b. Science produced by users (for example patients, their relatives or friends...))

### **a. Participatory science**

Scientist or organisation who develops much needed science about PM (like clinical studies presenting results of PM approach compared to traditional health care etc.)

### **b. U-Science**

“Citizens’ Science”, I see this as an opportunity to radically change medical science. There are already good examples of medical science conducted by patients or in participation between clinicians and patients and I it will be not difficult to find good candidates for NPA.

*My nominee in this category will be Foldit project where volunteers without background in any formal science solved advanced challenge in AIDS research, see*

*[http://www.huffingtonpost.com/2011/09/19/aids-protein-decoded-gamers\\_n\\_970113.html](http://www.huffingtonpost.com/2011/09/19/aids-protein-decoded-gamers_n_970113.html)*

*(Right now this group are rigging an attack on Ebola virus – I cross my fingers) ☺*

### **5. Sustainability** (not sure if this is the right term)

This category should recognize development of sustainable models for BOM – Business of Medicine.

It is about new ways of financing and organizing health care – and let’s agree – it is not good as it is.

It would remind a little Nobel Prize in Economy.

No doubt this is very important aspect of developing better health care

### **6. Innovation**

Innovators. People or organisations who developed smart solutions for health care (I would think all digital health segment would fit here)

### **7. Wholeness**

Price for efforts to include everyone – children, old, handicapped – everyone is important!

### **8. Good Practice**

Reports on what is working already and bring benefits for people. Great examples to follow!
